

APPLICATION CONSTRUCTION II

KOMPAS 3D

Artisan Rendering, a photorealistic rendering system for KOMPAS-3D

What will a building or structure look like, the design of which has not yet been completed? Finding out this is not only interesting - it is also extremely useful both for the design process itself, and for the company's business as a whole. Without waiting for the creation of the structure or the completion of construction, you can evaluate its appearance, effectively demonstrate the project to the customer, place images in catalogs and on websites.

Rubius Electric Suite: 0.4-10 kV transmission lines

The application is designed to automate the design process of 0.4-10 kV overhead power lines according to the plan in terms of the set of drawings of the EV brand.

Rubius Electric Suite: MZ

The application is intended for the design of lightning protection systems for buildings and structures for various purposes and the release of design documentation of the MZ brand.

Gas supply: GSN

The system is designed to automate the process of preparing and issuing working documents for laying gas pipelines. Drawings are issued in accordance with the requirements of GOST 21.610-85 "Gas supply. External gas pipelines".

External networks: NVK

The application is designed to solve the problems of automating the preparation and issuance of working documentation for laying pipelines for external water supply and sewerage networks.

Heating networks: TS

The application is designed to solve the problems of automating the preparation and issuance of working documentation for laying heating networks.

SPDS-Assistant

Application to the KOMPAS-Graphic system, intended for drawing up drawings in accordance with the standards of the design documentation system for construction (SPDS). Compliance with SPDS standards allows unifying the rules for the preparation of various project documentation.

Catalog: Rolled metal

The catalog is designed to speed up the design process when creating drawings of KM / KMD marks.
